Connect: bet → flirt

A

↻ Scatter will be inherited by this step

OUTPUTS (BET - SCATTERED)		INPUTS (FLIRT)	
brain_extraction	.nii, .nii.gz	Input image	.nii, .nii.gz
brain_mask	.nii, .nii.gz	Reference image	.nii, .nii.gz
brain_skull	.nii, .nii.gz	Output registered image filename	string
brain_mesh	.vtk	OPTIONAL	
brain_registration	.nii[], .nii.gz[]	Output transformation matrix filen…	string
log	File	Degrees of freedom (6, 7, 9, or 12)	int
		Initial transformation matrix	File

bet - Parameters

B

Docker Image

brainlife/fsl:6.0.4-patched2

Select a tag or enter a custom version

Conditional (when)

input | != null

$(inputs.input != null)

Select an input parameter, then write a condition (e.g., == true, > 0.5, != null). Step only runs when the condition is true. Skipped steps produce null outputs.

REQUIRED

input File

from BIDS Input / t1w (scattered)

Input T1-weighted image

output string

self + "_extracted" | Templates

valueFrom: $(self + "_extracted")

In scatter mode, self receives one element per iteration.

self is the parameter value (string)

Output filename
