bet - Parameters

a

Docker Image

brainlife/fsl: 6.0.4

Select a tag or enter a custom version

Conditional (when)

None

Select an input parameter, then write a condition (e.g., == true, > 0.5, != null). Step only runs when the condition is true. Skipped steps produce null outputs.

input File

from BIDS Input / t1w (scattered)

Input T1-weighted image

output string

brain

Output filename

OPTIONAL

overlay boolean

Generate brain outline image

mask boolean

Generate binary brain mask image

Connect: bet → flirt

b

Scatter will be inherited by this step

OUTPUTS (BET - SCATTERED)

brain_extraction	.nii, .nii.gz
brain_mask	.nii, .nii.gz
brain_skull	.nii, .nii.gz
brain_mesh	.vtk
brain_registration	.nii[], .nii.gz[]
log	File

INPUTS (FLIRT)

input Input image	.nii, .nii.gz
reference Reference image	.nii, .nii.gz
output Output registered image filename	string

OPTIONAL

output_matrix Output transformation matrix filename	string
